

Serial No. 10/623,315

IN THE CLAIMS

Claim 1 (original): A mold assembly comprises:

an upper molding device and a lower molding device engaging with the upper molding device,

the upper molding device having at least two first upper molds each having an oblong shape, at least a second upper mold having a tree shape, at least a third upper mold having a tree shape, at least a fourth upper mold having a tree shape, at least a fifth upper mold having a tree shape, at least a sixth upper mold having a taper interior, at least a seventh upper mold having a pair of inner bevels and a slit, at least an eighth upper mold having a slot, and at least a ninth upper mold in series,

the ninth upper mold having a tree-shaped blade,

a size of the third upper mold larger than a size of the second upper mold,

a size of the fourth upper mold almost the same as the size of the second upper mold,

a size of the fifth upper mold slightly smaller than the size of the fourth upper mold,

the lower molding device having at least two first lower molds each having an oblong recess, at least a second lower mold having a tree-shaped recess, at least a third lower mold having a tree-shaped recess, at least a fourth lower mold having a tree-shaped recess, at least a fifth lower mold having a tree-shaped recess, at least a sixth lower mold having a tree-shaped recess, at least a seventh lower mold having a tree-shaped recess, at least an eighth lower mold having a tree-shaped recess, and at least a ninth lower mold having a tree-shaped recess in series,

the first lower molds matching the first upper molds,

the second lower mold matching the second upper mold,

the third lower mold matching the third upper mold,

the fourth lower mold matching the fourth upper mold,

the fifth lower mold matching the fifth upper mold,

the sixth lower mold matching the sixth upper mold,

the seventh lower mold matching the seventh upper mold,

the eighth lower mold matching the eighth upper mold, and

the ninth lower mold matching the ninth upper mold.

Claim 2 (currently amended): A method of making stationery clips comprises steps of:

~~a metal plate electroplated~~ electroplating a metal plate in an electroplating device to

Serial No. 10/623,315

form a colorful electroplated film; [[,]]

disposing the metal plate ~~disposed~~ on a [[the]] first lower mold;

engaging a ~~and the~~ first upper mold engaging with the first lower mold to punch the metal plate to form two wing strips; [[,]]

disposing the metal plate ~~disposed~~ on a [[the]] second lower mold;

engaging a ~~and the~~ second upper mold engaging with the second lower mold to punch the metal plate to form a basic main body having a pair of connection parts each connected to the corresponding wing strip; [[,]]

disposing the metal plate ~~disposed~~ on a [[the]] third lower mold;

engaging a ~~and the~~ third upper mold engaging with the third lower mold to punch the metal plate to form an enlarged main body on the basic main body, and the enlarged main body having a pair of connection portions each connected to the corresponding wing strip; [[,]]

disposing the metal plate ~~disposed~~ on a [[the]] fourth lower mold;

engaging a ~~and the~~ fourth upper mold engaging with the fourth lower mold to punch the metal plate and to fold the wing strips upward in parallel; [[,]]

disposing the metal plate ~~disposed~~ on a [[the]] fifth lower mold;

engaging a ~~and the~~ fifth upper mold engaging with the fifth lower mold to punch the metal plate and to form a tree-shaped recess on the enlarged main body; [[,]]

disposing the metal plate ~~disposed~~ on a [[the]] sixth lower mold;

engaging a ~~and the~~ sixth upper mold engaging with the sixth lower mold to punch the metal plate and to fold the wing strips toward each other; [[,]]

disposing the metal plate ~~disposed~~ on a [[the]] seventh lower mold;

engaging a ~~and the~~ seventh upper mold engaging with the seventh ~~th-s-venth~~ lower mold to punch the [[m tal]] metal plate and to fold the wing strips close to each other; [[,]]

disposing the metal plate ~~disposed~~ on a [[the]] eighth lower mold;

engaging a ~~and the~~ eighth upper mold engaging with the eighth lower mold to punch the metal plate and to form a dent on the enlarged main body; [[, and]]

disposing the metal plate ~~disposed~~ on a [[the]] ninth lower mold;

engaging a ~~and the~~ ninth upper mold engaging with the ninth lower mold to cut an outer periphery of the enlarged main body to be disengaged from the metal plate to form a stationery

Serial No. 10/623,315

clip:

Claim 3 (original): A stationery clip has:

a generally tree-shaped main body and a pair of wing plates connected to the generally tree-shaped main body,

a tree-shaped recess formed on the tree-shaped main body,

the wing plates and the generally tree-shaped main body made in one piece, and

the wing plates being folded upward to be combined together.

Claim 4 (original): The stationery clip as claimed in claim 3, wherein the generally tree-shaped main body is electroplated to form a colorful electroplated film thereon.
